SUMMARY

As a Software Developer, I have delivered backend solutions at Derivco Sports using Golang, Docker, Kubernetes and Google gRPC.

Delivered full stack solutions at Lothea Ltd using C#, Vue.JS, Axios, and SQL Server while empowering new developers by leading a weekly web development course in HTML, CSS, and JavaScript for a year.

Currently work with agentic workflows using Claude!

EXPERIENCE

Junior full stack developer (Part-Time) - Lothea Ltd | Jun 2020-Sep 2021

- Designed a responsive user interface using Vue.js, HTML, JavaScript, and Axios, enhancing frontend performance and streaming API data integration.
- Developed middle-tier C# webservice which were deployed on Azure. Integrating Azure Blob Storage to streamline client file management from the user interface.
- Built robust database structures in Microsoft SQLServer using Entity Framework, streamlining data querying and storage operations.
- Built a C# analytics system to gather and store software usage metrics, enabling data-driven insights into user behaviour

Junior Developer – Make the Dot – Oct 2021 – April 2022

- Developed and tested interactive front-end features using Angular, JavaScript and TypeScript, ensuring robust code quality and enhancing overall user experience
- Developed a comprehensive onboarding process for new hires using Angular, JavaScript and TypeScript

Junior Developer – Derivco Sports – April 2022 – May 2025

- Built a business-critical gRPC API endpoints across multiple business layers to manage database storage and updates, ensuring accurate participant tracking for competitions.
- Ensured seamless system performance by executing unit and manual E2E tests, documenting results to verify complete feature parity between legacy and current implementations.
- Rebuilt legacy systems by analysing existing codebases and developing optimized versions in Golang.
- Delivered an HTTP API endpoint for the competition event creation, enabling seamless processing, storage, and updating of event data.
- Established a Golang unit and E2E testing framework using SQLMock, to mock out database entries and commands, improving code reliability and validation of database commands and table entries
- Standardized system deployments across Azure DevOps environments by building Kubernetes Kustomize pipelines to dynamically customize environment variables
- Delivered project milestones on schedule by executing structured two-week Agile sprints, driving end-to-end planning and daily scrums.

CURRENT TECHNOLOGIES

- C#
- Go
- Vue.JS
- JavaScript
- HTML
- TypeScript
- CSS
- Postgres
- Microsoft SQL Server
- Git
- Azure DevOps
